

We provide data visualization and analysis, mobile interactive tools, strategy development and planning to help you solve problems, promote collaboration, understand change and achieve balance.

Services

Web Planning Tools: We develop and implement mobile tools to enhance data analysis, public participation and project management in planning through web-based technologies.

Community Participation: We provide mediums through which the community can participate to ensure consensus and buy-in for planning solutions.

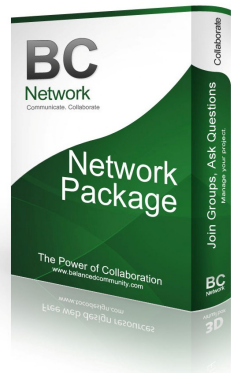

Visualization: We provide interactive visualizations and tools to enhance data analysis and presentation.

Research and Consultation: We conduct research and analysis to help communities understand past, current and future conditions in relation to economic, demographic, social and political change.

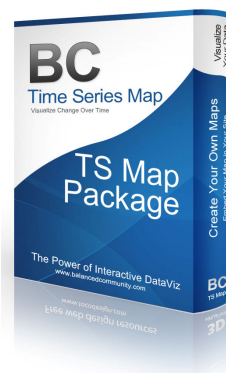

Tool Highlights

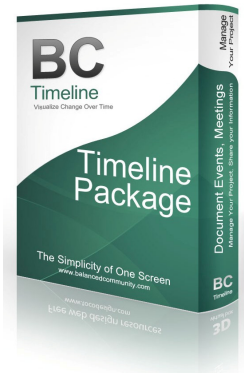

BCParticipate is a text messaging (SMS) and interactive voice response (IVR) survey tool that provides communities an efficient and cost effective way to gather live input at meetings and beyond. You get **your own local phone number** and there is no capital purchase necessary.

BCNetwork is a place for planners, staff, community members and consultants to share information and collaborate on difficult planning problems. The network can be used for project specific collaboration, or for long-term communication.

BCMap uses Google Maps, Flash and Flex to map time series data. You can map anything with a date and a latitude and longitude. The user interface allows you to upload and map your own data and provides a permalink so you can share your map or embed it on your webpage.

BCTimeline is an interactive timeline tool which allows you to efficiently store and display information on one page. It can be used to document events, projects, reports and plans, both in the past and future. Update your project schedule, upload your drafts and share them on a password protected website.
